

## Industry and Domain Research

- There have been successful education hybrid education networks but the goal with this new network would be to take it completely online.
- This will be done completely online as online education platforms such as OMSCS can be hyper effective compared to traditional live in person sessions
- Not only can this platform educate users on the different telemedicine services they can use, but also healthcare in general so they can be more aware of their health and conditions.
- Not only can this platform educate users on the different telemedicine services they can use, but also healthcare in general so they can be more aware of their health and conditions.
- This education can also be integrated into medical student programs as a requirement, which will significantly increase the uptake of telehealth technologies in the future.
- The benefit of covering such a broad audience is that material can be reused and slightly altered for different groups as well as allowing different groups to explore all content given an interest.

## Interviews

- Participants: college pre-medical students and general potential patients.
- Asked what they know about telehealth and what resources they use to learn about it.
- Responses: limited knowledge of telehealth and general answers to resources such as Google and Youtube but no centralized platform for specific telehealth info.
- All agreed that they could benefit from a platform like Telehealth Edu.
